Orange

PEACH TREES

The following varieties are listed in the order
of their ripening.

GREENSBORO—Best early variety. Large and beautifully colored. July 15th.

CUMBERLAND—White, a seedling crossed with Greensboro. The fruit attractively colored with red almost free, firmer and better quality than Carman.

ROCHESTER—Yellow, free, yellow flesh of the type of the Crawford. Ripens a week or two before the Elberta. A new introduction in this locality, but already popular in some sections.

GOLDEN JUBILEE—Yellow, commercial peach. Orchardist for a century have been looking for an early peach of high quality, fine flavor, yellow, freestone, attractive color and firm texture and eventually they have found it in the marvelous golden Jubilee. Its shipping qualities are equal to the Elberta.

CARMAN—White, semi-free stone, yellow white skin well covered with red, flesh white, slightly tinged with red, ripens about the last of July.

CHAMPION—White, freestone, excellent bearer, splendid canning peach.

SOUTH HAVEN—Yellow, freestone, one of the best canning peaches. Ripens two weeks after Jubilee.

FULTON—White, very large, creamy white to a beautiful red. Ripens Aug. 25th. For appearance and flavor they are hard to beat. Will not hold up well for long shipments.

HALE HAVEN—Yellow, this peach is always a freestone, has a tough skin, very highly colored and well adapted to large commercial plantings. The tree is vigorous, the fruit is large. Being about two weeks earlier than the J. H. Hale and Elberta and of extremely high quality and a good shipper. We know of no peach we can recommend more highly than the Hale Haven as a commercial variety to follow the Golden Jubilee and to precede the Elberta season.

BELLE OF GEORGIA—White. Tree usually known as Belle, it is creamy white with a red cheek. Best all around white peach on the market. Good shipper, ripens August 15th to Sept. 1st.

ELBERTA—Yellow, free, large in size, yellow skin with deep red cheek, flesh is golden yellow, red at pit, firm and juicy, ripens from August 15th to September 1st. This peach is as near perfect for commercial purposes as has yet been found, the size is large and uniform and the flesh, although juicy and tender, is firm enough to stand long hauls and hold its shape in canning. Easily the leader among the commercial peach.

J. H. HALE—Yellow, free, very large in size. Skin, a dark yellow, coloring to red and without fuzz. Flesh a deep yellow, firm and of excellent quality, ripens just after the Elberta. For appearance it is without equal and it grows to perfection in Adams County. Good crops have been produced regularly when all other varieties froze and growers have realized handsome profits.

SHIPPERS LATE RED—Yellow, large round freestone very attractive. Ripens just after Elberta and J. H. Hale.

BRACKETT—Yellow, the fruit is rich yellow with dark carmine check. Size is as large or larger than Elberta and much better flavored. Begins to ripen a few day after Elberta.

LATE ELBERTA—Yellow. Very similar to Elberta except the season, ten days later.

HEALTH CLING—White, cling, good size, skin and flesh white with a slight tinge of crimson. The flavor is characteristic and delightful and it is deservedly popular among the housekeepers for canning, ripens about October 1st and keeps almost like apples.

IRON MOUNTAIN—White, free, yellow skin with deep red cheek, flesh white, best late white variety. Ripens about October 1st.

SALWAY—Yellow, free, an excellent and well tried late peach, ripening about the last of September.

After 30 years of growing and harvesting peaches we present the following list of varieties for commercial planting as past the experimental stage and sure to be profitable.

Greensboro	Elberta
Cumberland	J. H. Hale
Jubilee

NOTICE TO PURCHASERS

We use the greatest care to have our stock reliable and true to name, and will on proper proof, replace anything that may not prove to name. We do not give any warranty. It is mutually agreed between the purchaser and ourselves that we shall not be held responsible, from any cause, for more than the original cost of the trees.

We have had 40 years' experience in growing fruit and have 100 acres in Fruit and Nursery Stock. Practically all our nursery stock is budded and grafted from our own bearing trees.

No Charge for Packing or Delivering
to Railroad.
